The EUT is a placed on as turn table which is 0.8 m above ground plane. The turn table shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter(EUT) was rotated through three orthogonal axes according to the requirements in ANSI C63.4-2003.

The EUT was placed on a turntable which is 0.8m above ground plane. .

The turntable shall rotate 360 degrees to determine the position of maximum emission level.

EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emissions.

And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.

The frequency from 30MHz to 1000MHz was checked and the detector bandwidth of the test receiver was set to 120kHz; the frequency above 1GHz was checked and the detector bandwidth of the test receiver was set to 1MHz.

Note:

- (1) Emission level PK (dBuV/m) = Reading level (dBuV) + Factor(dB)
Emission level AV (dBuV/m)= Emission level PK (dBuV/m) + Duty cycle(dB)

Example: 315.00MHz (Z axis)

Reading level = 62.50 dBuV;

Factor= 13.20 dB;

Emission level PK(dBuV/m) = 62.50 + 13.20 = 75.70 dBuV/m

- (2) Measuring frequencies from 30 MHz to the 10th harmonic of fundamental frequency of 434MHz.
- (3) Margin (dB)= Limit - Emission level
- (4) * Denotes spurious frequency which falls within the Restricted Bands specified in provision of § 15.205, then the general radiated emission limits in § 15.209 apply.

6. Emission Bandwidth

6.1 Limits

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency.

Bandwidth is determined at the points 20 dB down from the modulated carrier.

FREQUENCY (MHz)	BANDWIDTH LIMIT(kHz)
Above 70-900	$0.25\% \times \text{Center Frequency (MHz)}$
Above 900	$0.5\% \times \text{Center Frequency (MHz)}$

6.2 Test Procedure

The Occupied bandwidth is measured with a spectrum analyzer connected to the transmitter output while EUT is operating in transmit mode with modulation at the appropriate frequency. The spectrum analyzer was set to: RBW = 10 kHz, VBW = 10 kHz, span = 500 kHz
